

NNLO DIS 1+1, $O(\alpha_s^2)$ coefficient per bin: $x = 0.05$, $Q^2 = 1000 \text{ GeV}^2$ (180 runs, DISENT cutoff 10^{-10}) (◆ = bin containing the Born jet)

- ◆ DISENT + P2B ◆ τ_2 slicing + P2B, $\tau_2 > 0.0003 \tau_1$ ▼ pure τ_1 slicing, $\tau_{1,\text{cut}} = 10^{-3}$
■ τ_2 slicing + P2B, $\tau_2 > 10^{-5}$ ▲ pure τ_1 slicing, $\tau_{1,\text{cut}} = 3 \cdot 10^{-4}$
